Projects

Fish-Based Market Indicator System — Python, OpenCV, Web Scraping

2024

- Scraped Reddit and online stock forums to identify the most-mentioned and least-mentioned stocks each day; randomly assigned each to left or right positions when ties occurred.
- Captured minute-by-minute fish counts using OpenCV, incrementing a tally based on which side contained more fish at each snapshot.
- Allocated \$1 per day to the stock associated with the dominant side at end-of-day as a controlled, low-risk experiment.
- Documented model limitations, including behavioral bias and experimental controls, emphasizing analysis over performance.
- Idea inspired by Michael reeves
